(54) INFORMATION DISPLAY DEVICE

(57)Abstract:

PURPOSE: To provide an information display device which displays an editing object part in a screen large and the peripheral part small in order to facilitate editing operation and effectively use a narrow screen.

CONSTITUTION: A function for obtaining the character height of a line at an interval with middle rows, by using the interval as a variable by regarding the rows of text information displayed in the center of the screen as the middle rows and denoting the number of the middle rows from the head of a text as middle and the character height when the middle rows are displayed as (h) is determined; and the uppermost part row displayed at the uppermost part of the screen is regarded as a line no row and the number of rows from the text head to the line no row is found as a line no by the function (step 206). According to the middle, line no, and this function, the character height of each row displayed on the screen is found (steps 307-310) and a display image displayed on the screen is formed.
